# SCALE FOR PROJECT CPP MODULE 04 (HTTPS://PROJECTS.INTRA.42.FR/PROJECTS/CPP-MODULE-04)

You should evaluate 1 student in this team

Γ

Git repository

git@vogsphere.42roma.it:vogsphere/intra-uuid-88b96c51-009f-4853-a63c-

#### Introduction

Please comply with the following rules:

- Remain polite, courteous, respectful and constructive throughout the evaluation process. The well-being of the community depends on it.
- Identify with the student or group whose work is evaluated the possible dysfunctions in their project. Take the time to discuss and debate the problems that may have been identified.
- You must consider that there might be some differences in how your peers might have understood the project's instructions and the scope of its functionalities. Always keep an open mind and grade them as honestly as possible. The pedagogy is useful only and only if the peer-evaluation is done seriously.

### **Guidelines**

- Only grade the work that was turned in the Git repository of the evaluated student or group.
- Double-check that the Git repository belongs to the student(s). Ensure that the project is the one expected. Also, check that 'git clone' is used in an empty folder.
- Check carefully that no malicious aliases was used to fool you and make you evaluate something that is not the content of the official repository.
- To avoid any surprises and if applicable, review together any scripts used to facilitate the grading (scripts for testing or automation).
- If you have not completed the assignment you are going to evaluate, you have to read the entire subject prior to starting the evaluation process.
- Use the available flags to report an empty repository, a non-functioning program, a Norm error, cheating, and so forth. In these cases, the evaluation process ends and the final grade is 0, or -42 in case of cheating. However, except for cheating, student are strongly encouraged to review together the work that was turned in, in order to identify any mistakes that shouldn't be repeated in the future.
- You should never have to edit any file except the configuration file if it exists. If you want to edit a file, take the time to explicit the reasons with the evaluated student and make sure both of you are okay with this.
- You must also verify the absence of memory leaks. Any memory allocated on the heap must be properly freed before the end of execution.

 $\square$  No

□ No

You are allowed to use any of the different tools available on the computer, such as leaks, valgrind, or e\_fence. In case of memory leaks, tick the appropriate flag.

#### **Attachments**

□ subject.pdf (https://cdn.intra.42.fr/pdf/pdf/102893/en.subject.pdf)

## **Preliminary tests**

If cheating is suspected, the evaluation stops here. Use the "Cheat" flag to report it. Take this decision calmly, wisely, and please, use this button with caution.

#### **Prerequisites**

The code must compile with c++ and the flags -Wall -Wextra -Werror Don't forget this project has to follow the C++98 standard. Thus, C++11 (and later) functions or containers are NOT expected.

Any of these means you must not grade the exercise in question:

- A function is implemented in a header file (except for template functions).
- A Makefile compiles without the required flags and/or another compiler than c++.

Any of these means that you must flag the project with "Forbidden Function":

- Use of a "C" function (\*alloc, \*printf, free).
- Use of a function not allowed in the exercise guidelines.

□ Yes

□ Yes

- Use of "using namespace <ns\_name>" or the "friend" keyword.
- Use of an external library, or features from versions other than C++98.

Exercise 00: Polymorphism  As usual, there has to be enough tests to prove the program works as expected. If there isn't, do not grade this exercise. If any non-interface class is not in orthodox canonical class form, do not grade this exercise.					
First check					
There is an Animal class that has one attribute: One string called type. You must be able to instantiate and use this class.					
□ Yes	□ No				
Inheritance					
They are at least two classes that inherit from Animal: Cat and Dog. The constructor and destructor outputs must be clear.  Ask the student about constructor and destructor orders.					
□ Yes	□ No				
Easy derived class  The attribute type is set to the appropriate value at creation for every animal. Cat must have "Cat" and Dog must have "Dog".					

**Animal** 

function. makeSound() sl	tion always called the appropriate ma nould be virtual! Verify it in the code.	keSound()
virtual void makeSound() The return value is not im	const; nportant but virtual keyword is mandat	dory.
There should be an exan use the virtual keyword (s	nple with a WrongAnimal and WrongC	Cat that don't
	□ Yes	□ No
As usual, there has to be	enough tests to prove the program w	set the world on fire rorks as expected. If there isn't, do not grade this I class form, do not grade this exercise.
Concrete Animal		
The Brain attribute should	ed Brain. quired private Brain attribute. d not be inside the Animal class. cific outputs upon creation and deletio	n.
	□ Yes	□ No
Concrete Brain		
The copy a Cat or a Dog Test something like: Dog basic;	should be a deep copy.	
{ Dog tmp = basic; }		
the Brain will get deleted The copy constructor sho	o and basic will use the same Brain an with tmp at the end of the scope. ould do a deep copy too. mentation in orthodox canonical form	
save you from hours of p	ain.	
	□ Yes	□ No
Destruction chaining		
The destructors in Anima Ask an explanation of wh Test it.	l must be virtual. at will happen without the virtual keyv	vord over Animal destructor.
	□ Yes	□ No
Assignment and copy		
subject requires. Deep copy means you ne	nt behaviors of the Cat and Dog are like eed to create a new Brain for the Cat form is really implemented (i.e. no en	or Dog. npty
copy assignment operato	ors and so forth). Nothing should be prode is very simple so it needs to be cle	

## **Exercise 02: Abstract class**

As usual, there has to be enough tests to prove the program works as expected. If there isn't, do not grade this exercise. If any non-interface class is not in orthodox canonical class form, do not grade this exercise.

Abstract class				
There is an Animal class exactly like the one	n the subject.			
The Animal::makeSound is a pure virtual fund				
It should look like : virtual void makeSound() of The "= 0" part is mandatory.	const = 0;			
You should not be able to instantiate an Anim	al			
Animal test; //should give you a compile error about the class being abstract				
□ Yes	□ No			
Concrete Animal				
Class Cat and Dog are still present and work	exactly like in ex01.			
□ Yes	□ No			
Exercise 03: Interface	e and recap			
	ve the program works as expected. If there isn't, do not grade this			
exercise. If any non-interface class is not in o	rthodox canonical class form, do not grade this exercise.			
nterfaces				
There are ICharacter and IMateriaSource interequired in the subject.	rfaces that are exactly like			
□ Yes	□ No			
MateriaSource				
The MateriaSource class is present and implemember functions work as intended.	ements IMateriaSource. The			
□ Yes	□ No			
Concrete Materia				
There are concrete Ice and Cure classes that				
clone() method is correctly implemented. The The AMateria class is still abstract (clone() is	·			
virtual ~AMateria() is present.	a paro ranouvirj.			
AMateria contains a protected string attribute	to store the type.			
□ Yes	□ No			
Character				
The Character class is present and implemen an inventory of 4 Materias maximum.	ts ICharacter. It has			
The member functions are implemented as the copy and assignment of a Character are (deep copy).				
	□ No			
□ Yes				

## **Ratings**

Don't forget to check the flag corresponding to the defense

□ Ok			□ Outstanding project			
Empty work	□ Incomplete work	W Invalid compilation	□ Cheat	d Crash	□ Concerning situation	
□ Leak	is .	1 Forbidden function	den function □ Can't support / explain code		ort / explain code	
Conclus Leave a comment	sion t on this evaluation					
Finish evaluation
